DETAILED ACTION

Specification

1. Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

2. The abstract of the disclosure is objected to because it has more than 150 words.
Correction is required. See MPEP § 608.01(b).

Claim Rejections - 35 USC § 101

3. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

4. Claims 31-39 are rejected under 35 U.S.C. 101 because claims 31-39 are directed to a recording medium storing transport stream being composed of one or more predetermined units. Data structures not claimed as embodied in computer-readable media are descriptive material per se and are not statutory because they are neither physical "things" nor statutory processes. see, e.g., Warmerdam, 33 F.3d at 1361, 31 USPQ2d at 1760 (claim to a data structure per se held nonstatutory) and

Art Unit: 2616

merely claiming nonfunctional descriptive material stored in a computer-readable medium does not make it statutory. See MPEG 2106.IV.B.1.

Allowable Subject Matter

5. Claims 22-30 are allowed.

The present invention is directed to a method of recording transport stream composing of one or more predetermined units. Each independent claim identifies the uniquely distinct feature "recording a transport stream on the recording medium, the transport stream being composed of at least one stream part, each stream part including a navigation packet at a head of the stream part and at least one data packet, the navigation packet carrying navigation information used to manage the at least one data packet, the navigation information including program clock reference (PCR) information". The closest prior art, Tozaki et al (US 6,567,409 B1) and Ando et al (US 6,782,189 B2) disclose conventional DVD, either singularly or in combination, fail to anticipate or render the above underlined limitation obvious.

The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
